

# STANLEY®

# HAND TOOLS

## TRADITION. PRODUCTIVITY. INNOVATION.

These words are everything you know Stanley Tools represents. They encompass all that we strive to incorporate into each product. That is why every year Stanley engineers go above and beyond to collect consumer feedback, conduct quality testing and use their own vast knowledge of hand tools to improve our broad line of products. With that information put to work in the lab, we bring you our professional Stanley and Stanley® FatMax® product lines with industry-leading innovations. We work to continually design products with superior features that will see you through to the end of your job and beyond.

**STANLEY. TOOLS THAT GET THE JOB DONE FASTER, EASIER, BETTER.**

# MEASURING TOOLS

Stanley has been manufacturing high-quality measuring tools since 1854, well before Henry Ford's Model T and Orville and Wilbur's fun-fly at Kitty Hawk. That same year, A. Stanley & Company was founded and began producing folding wooden rules for carpenters and other tradesmen. From those humble beginnings, Stanley Tools grew to become today's gold standard by which other hand tools are measured.

Throughout its long history of manufacturing some of the world's best measuring tools – a span of over 165 years – Stanley has been driven by an unwavering commitment to quality, innovation and precision – principles that guide the company to this very day. Along the way, Stanley has achieved several noteworthy milestones, which included making the first steel tape rules in 1930 and in 1963 introducing the iconic PowerLock® “coilable” steel rule, which has become the world's most popular measuring tape. And in 1969, the PowerLock® tape measure was selected by NASA to be part of the lunar landing gear on *Apollo 11*.

Not satisfied to rest on its laurels, Stanley redefined the measuring-tool market in 1999 with the launch of the Stanley FatMax® line of tape measures. These high-performance, professional-duty tools combine rugged construction with innovative features, such as a 1-1/4-inch-wide blade equipped with the world's first 11-foot blade standout, Mylar® polyester film for blade protection against rust and wear, and BladeArmor™ coating that extends blade life up to 10 times longer than a basic Stanley tape rule. The FatMax® line also includes a 40-foot tape, which is one of the longest self-retracting short measuring tapes on the market today.

In 2006, Stanley shook up the market once again with the introduction of Stanley® FatMax Xtreme® Tools, which include chrome-cased tape measures that boast the world's longest blade standout available on the market today: 13 feet, allowing one person to do the work of two. They also have cushion grips and an oversized end hook that can easily grab construction material from any angle.

So regardless of whether you're a professional contractor, a do-it-yourselfer or an astronaut – you can always trust the quality and accuracy of Stanley measuring tools, as people have for nearly 8 generations.

### FatMax Xtreme® Tape Rules

- 13' blade standout
- 1-1/4" wide blade for easy readability
- 150% larger hook\* designed to grab on side, top or bottom for versatility
- BladeArmor™ coating on the first 6" maximizes durability of the blade
- High-visibility Mylar® polyester film extends life of entire blade and provides visibility in low lighting
- Chrome case with durable rubber-holds up to heavy use
- AirLock™ rubber slide lock is resistant to impact and makes locking and unlocking easy
- 16" and 19.2" stud center markings simplify framing jobs
- Cushion grip provides comfortable, slip-resistant hold
- Three-rivet, corrosion-resistant Tru-zero end hook for accurate measurements

# LAYOUT TOOLS

Stanley's commitment to producing precision-engineered, extremely accurate tools is most evident in its extensive line of layout tools, a category that includes nearly 60 different levels and two dozen types of squares. But to truly appreciate its commitment, consider this: Stanley has been making layout tools for over 150 years.

In 1857, The Stanley Rule and Level Company joined forces with the Stanley Works, which up until that point was primarily a hardware manufacturer. After the Civil War, the company continued to diversify and grow its tool business, and is now widely recognized as one of the world's leading manufacturers of quality hand tools.

Today, Stanley designs and builds a wide variety of levels, including box-beam, I-beam, torpedo, magnetic and adjustable-vial models that permit you to read and mark any angle between 0 and 90 degrees. There's even a post level that folds flat for easy storage.

The levels range in size from a 3-inch-long line level to a 96-inch-long I-beam level. And unlike some manufacturers, Stanley isn't satisfied with using a single material to make all its levels. Instead, it chooses the optimum materials for building each tool. As a result, Stanley makes levels out of extruded aluminum, die-cast aluminum and shock-resistant ABS plastic.

The company also makes nearly two dozen different sizes and styles of squares, including combination squares, carpenter's framing squares, folding squares and quick squares. Again, to ensure accuracy, each tool is precision-machined and/or cast under the highest quality standards.

This extremely popular line of reliable layout tools includes chalk lines, straight edges and plumb bobs. So regardless of whether you're a do-it-yourself homeowner or a professional contractor, Stanley has the tools you need to accurately measure, layout and mark virtually any piece. And the company designs and builds each layout tool with three criteria in mind: accuracy, ease of use and durability – a philosophy born a century and a half ago and still practiced today.

# ELECTRONIC TOOLS

Stanley's team of world-class engineers and industrial designers has developed a series of versatile electronic tools that deliver an unprecedented level of accuracy, reliability and long-term performance.

The lineup includes seven different stud sensors and an electronic measurer known as a distance estimator. These handheld, battery-powered devices feature state-of-the-art electronics and easy-read LCD screens.

Some of the stud sensors can detect wood studs through multiple wall thicknesses up to 1-1/2 inches. And most models can also locate live electrical wires buried behind walls and above ceilings. The top-of-the-line Pro Stud Sensor 500 even comes with a laser line built in and a separate laser line that can be mounted to the wall. Both lasers come with level vials to help project and level or plumb lines.

Stanley's IntelliMeasure® Distance Estimator allows one person to quickly and easily measure distances up to 40 feet at just the push of a button. The LCD screen displays the last 3 measurements for quick reference, and will automatically calculate square-foot area and cubic-foot volume.

Stanley's electronic tools are designed to withstand years of use in harsh and dusty environments.

**Pro Stud Sensor 500 and Laser Line Level**

- Detects wood/metal studs through multiple wall thicknesses (1/2", 1", 1-1/2")
- Continuous live wire detection
- LCD screen is backlit for visibility when detecting studs
- Versatile 2-laser set can be used separately or together to create horizontal and vertical laser cross lines
- Projects laser lines up to 20 feet onto a work surface
- Unique adhesive dots used to mount the laser module to most walls for hands-free operation (8 included)
- Required batteries - 9 Volt and 2 AAA (not included)

# KNIVES & BLADES

Stanley manufactured its first utility knife back in 1935, and it didn't take long for the world to take notice. Compact, rugged, comfortable to hold and armed with a razor-sharp blade, it quickly became an indispensable tool for a wide variety of tradesmen, fabricators and installers.

Look into virtually any toolbox, shop cabinet, workbench, tool belt or kitchen junk drawer and you'll likely find a Stanley utility knife. In fact, the tool's widespread acceptance has even received iconic status; in the United Kingdom, Australia and New Zealand, any utility knife is simply known as a Stanley knife.

It's worth noting as well that Stanley hasn't maintained its dominant market position for over 75 years by being complacent. The company has made a serious commitment to continuously redesign, refine and enhance its utility knives and blades. It now makes nearly 60 different sizes and styles of utility knives, including ones with retractable blades, fixed blades and snap-off blades. Stanley also offers several specialty knives and blades manufactured for specific tasks, such as cutting carpeting, roofing materials, acrylic sheets, plastic laminates, linoleum and even sod.

Some of the many features Stanley developed and first brought to market include its interlocking nose, which securely locks together the two knife halves for precise cutting, and an InstantChange™ design that allows you to quickly change blades without using a screwdriver to open the knife. Other features found on Stanley knives include a non-slip, sure-grip thumb rest and an integrated string cutter.

Stanley's commitment to excellence and innovation extends to its offering of induction heat-treated blades that stay sharper up to 75 percent longer than standard single-material blades. In fact, Stanley blades have become so popular, its state-of-the-art manufacturing facilities must pump out 20,000 miles of blades each and every year to keep up with demand. And with the company's devotion to innovation, design and quality, the unprecedented success of the Stanley knife will undoubtedly continue for the next 75 years.

# SAWS

Stanley has been at the forefront of promoting the use of portable hand saws. Today, the company offers nearly 60 different types and sizes of hand saws for cutting almost everything from woods studs, gypsum wallboard and metal rods to plastic pipe, hardwood flooring and tree limbs.

While some of today's tool manufacturers have greatly reduced the number of hand saws they make - some even eliminating them altogether - Stanley continues to push forward, constantly developing new and long-lasting saws. This determination has created a large and incredibly loyal customer base and made Stanley one of the largest hand saw manufacturers in the world.

The Stanley hand saw line includes carpenter's hand saws and panel saws, backsaws and compass saws, and Japanese-style pull saws. If you've got something to cut, chances are there's a Stanley handsaw that can cut it.

Some of the many noteworthy enhancements available on a Stanley handsaw include: precision-ground, razor-sharp teeth; thick, rigid blades that cut straighter with less binding; induction-hardened teeth that stay sharper 5 times longer than standard teeth; over-molded rubber hand grips; and BladeArmor™, a durable composite blade coating that provides 2 times more rust resistance, six times more abrasion protection and 50 percent less friction than standard lacquered blades.

Stanley also developed the revolutionary InstantChange™ feature, which allows you to quickly and easily remove the saw blade from the handle and replace it with any one of 7 different blades. With this versatile saw, you can go from trimming roof rafters one minute to removing tree limbs the next.

The engineers at Stanley have even found a way to improve the performance of even the most modest of hand saws. With more than a dozen models available, Stanley is the go-to source when you need to cut metal. It makes standard, flat-frame hacksaws, as well as high-tension tubular frame saws and low-profile hacksaws for cutting in cramped quarters. Stanley also makes the famous and very popular Mini-Hack™ Utility Saw, which is indispensable for cutting in tight spaces and narrow crevices.

Finally, to complement its diverse line of handsaws, Stanley offers a collection of portable miter boxes, which provide a quick, accurate way to make square cross cuts and angled miter cuts.

### FatMax® High-Tension Hacksaw

- Durable, one-piece body is designed for ultra-high tension of 32,000 psi
- Pre-tensioning mechanism holds blade in place for quick and easy blade changes
- Thumb-dial adjustable tension mechanism allows for tension memory
- Large cutting capacity – up to 4-3/4" throat depth for extra-deep cutting
- Power load sliding tension delivers leverage when increasing tension and control when releasing blade
- Contoured handle and front thumb grip are ergonomically designed for control
- Blade can be positioned at 45° or 90° cutting angle

SKU #	DEPTH OF THROAT		BLADE LENGTH		BOX QTY	CARTON QTY	UPC

### High-Tension Hacksaw

- Single-action blade tensioning device is easy to use, retains tension memory and can be adjusted to apply varying tension to the blade
- Quick-release lever allows for fast blade changes
- Rigid metal internal beam construction for stability and strength
- Molded bi-material, impact-resistant composite frame absorbs shock
- Ergonomically designed contoured handle and front thumb grip to give precise control
- 45° and 90° cutting angles for flexibility of cutting needs

# HAMMERS

Stanley has a long, rich history of manufacturing some of the world's best-performing and best-selling hammers, a product tradition that continues to this very day. However, the inspiration for the original Stanley hammer – and all other striking tools for that matter -- dates back a bit further in time.

The tool that we now know as the hammer was first developed around 7000 B.C. during the Neolithic period. It was during the New Stone Age that man first lashed a tree branch to a chunk of stone. And with this act, known as hafting – fitting a handle to a tool previously held in the hand – the hammer was born.

That simple act took place slightly before Stanley Tools was founded, but the company has made great strides in the past 150 years or so to become one of the world's premier makers of high-quality hammers. In 1863 Stanley made 20 different types of wooden mallets, and just 9 years later the company added 14 iron hammers to its growing line of striking tools. Many of these new hammers were designed for specific tradesmen, such as cobblers, farriers, blacksmiths and railroad workers.

Today, Stanley Tools manufactures nearly 100 different types of hammers in virtually every imaginable size and shape. They include nail hammers, framing hammers, sledgehammers, soft-faced hammers, ballpeen hammers and a dizzying array of specialty hammers for such jobs as tacking upholstery, nailing shingles, laying bricks and hanging drywall.

Stanley's world-renown and world-class research and development teams design hammers that not only exceed customers' expectations, but also live up to the proud Stanley name. And in its state-of-the-art manufacturing facilities, Stanley produces hammers made from the finest materials available, including wood, fiberglass, steel and graphite.

One of Stanley's most innovative hammer advancements includes the revolutionary AntiVibe® technology that features a patented tuning fork and shock-reducing stabilizer bars built into the handle. The handle is forged from a single piece of hardened steel, and the tuning fork design minimizes vibration and shock at impact.

Any tool manufacturer can design a hammer to pound in nails. The engineers at Stanley looked beyond the nail and took into account the person behind the hammer. And that's the kind of thorough, thoughtful engineering you'll find in every Stanley tool.

**FatMax Xtreme® Steel AntiVibe® Hammers - Oversized Strike Face**

- 75% larger\* strike face for improved striking accuracy
- AntiVibe® technology minimizes vibration and shock at impact
- Torsion control stabilizers reduce arm-twisting fatigue
- Magnetic Nail Start feature for extended reach for one-handed nailing
- Exclusive rim temper reduces incidences of chipping or spalling
- Forged, one-piece steel construction for strength and durability
- Slip-resistant handle for a secure grip and comfort
- Precision balanced

# DEMOLITION

Stanley has elevated demolition tools from crude implements to precision-engineered tools that are every bit as essential and indispensable as a hammer or screwdriver. And while some tool companies make the same basic flat pry bar and curved crowbar, Stanley stands out from the pack with more than two dozen types of demolition tools, including several models that feature original designs.

For general purpose demo work, such as tearing down walls and ceilings, prying off roofs and dismantling kitchen cabinets, Stanley makes two types of tools: demolition and ripping bars, which are intended for ultra-heavy-duty work and have forged hook and claw ends, and spring-steel wrecking bars, which provide great prying strength and resiliency, but at a much lighter weight than traditional ripping bars.

Stanley offers 4 different models of its world-famous WonderBar®, one of the most popular flat bars on the market today. The WonderBar® is extremely useful for almost any prying, nail pulling, wood-splitting or levering job you're likely to encounter.

There are also 5 versions of Stanley's latest creation, the FuBar®, which is arguably one of the most versatile, innovative demo tools on the market today. The FuBar® Functional Utility Bar is a multipurpose tool that can be used for both lightweight and heavy-duty work, including prying, bending, striking, nail pulling, separating and lumber splitting. The one-piece forged steel bar has a unique two-tier jaw for securely locking onto 2-by dimensional lumber.

A specialty tool, called the Board Bender Deck Tool, is designed for straightening joists and decking boards. Stanley makes a line of shorter, thinner Precision Pry Bars that are specifically made for removing decorative wood trim, thin moldings, and window and door casings.

Rounding out Stanley's extensive line of demolition tools is a collection of cold chisels that are perfect for chopping through steel bolts, stone, sheet metal, brick, ceramic tiles, concrete and virtually any other hard, abrasive material.

# CHISELS & NAIL SETS

Stanley is proud of its long history of producing some of the world's best wood chisels, a tradition that continues to this very day. Stanley began making chisels in the mid-1800s, and is one of the few tool manufacturers that has continually expanded its line over the years by designing new wood chisels.

Today, Stanley makes nearly three dozen chisels in a wide range of sizes and styles. The tools are engineered to meet the no-excuse demands of both fine woodworkers and professional carpenters. With a respectful nod to its rich history, Stanley pays tribute to its past with its line of traditional wood-handled Sweetheart™ chisels and Bailey® chisels. Sweetheart™ tools are named after William H. Hart who was president of Stanley from 1884 to 1915. Bailey® chisels commemorate a line of tools that was originally designed by legendary Boston toolmaker Leonard Bailey.

The company recently expanded its chisel collection with a line of FatMax® chisels, arguably some of the toughest, most durable chisels on the market today. Each features a hardened, tempered carbon alloy steel blade that's beveled on three sides, then precision ground to a razor-sharp cutting edge. The blade is permanently fused onto a bi-metal, sure-grip handle that's extremely crack resistant. And unlike lesser-quality chisels, FatMax® chisels are equipped with steel striking caps, which allow you to strike the chisel with a steel-headed hammer without damaging the handle.

Stanley manufactures a full range of standard-length chisels for general woodworking and carpentry, but it also makes several short-blade chisels, which are ideal for working in tight spaces and cramped quarters; they also fit easily into tool-belt pouches.

Along with its extensive offering of high-quality chisels, this tool category also includes Stanley's popular line of nail sets. The nail sets are sold individually or in convenient 3-piece sets.

The nail set might be one of the simplest tools ever produced, but in true Stanley fashion the company went back to the drawing board in an attempt to enhance the tool's performance, quality and durability. The results: Cushion Grip Nail Sets, which are jacketed in thick rubber for outstanding comfort, and the revolutionary FatMax® Interchangeable Nail Set that's 2 nail sets in 1.

# FASTENING TOOLS

Stanley is one of the world's preeminent manufacturers of fastening tools, and is responsible for helping to elevate awareness and performance from a niche product to an indispensable, must-own line of tools.

This broad category includes four distinct and distinguished tool lines: staplers (manual and electric), hammer tackers, hand "pop" riveters and electric glue guns. There are nearly 2 dozen fastening tools, so if you've got something to fasten down or hold together, Stanley has the tool to get the job done right.

Professional contractors have relied on Stanley manual staplers since the 1970s, and it's easy to understand why. These ruggedly built tools are tough enough to survive dusty, dirty job sites and still provide enough power to drive staples into thick, dense wood – day in and day out, all day long. There are three types of staplers to choose from: staple-only models, ones that shoot staples and brads, and another that fires staples and special cable staples to fasten wires and cables up to 1/4-inch diameter. Some of the many features found on Stanley staplers include easy-squeeze handles, quick-loading magazines, high/low power switch and anti-jam mechanisms.

Stanley also makes two heavy-duty electric fastening tools. Its versatile stapler/brad nailer drives staples and brads up to 1-1/4 inches long. There's a dedicated brad nailer, as well, which shoots 18-gauge brads ranging in length from 5/8 inch to 1-1/4 inches. Each electric model features a high/low power switch, contoured grip for comfort and 8-foot power cord.

Rounding out Stanley's stapler line is a pair of heavy-duty hammer tackers. These swing-and-tap tools provide a quick and effective way to staple down sheet materials, such as house wrap, roofing felt, building paper and carpet padding. To complement its line of staplers, Stanley offers four different hand riveters, which provide quick, reliable ways to install steel, aluminum and stainless steel "pop" rivets.

Some of the many Stanley enhancements found on these tools include extra-long handles for increased leverage, rugged die-cast metal construction, interchangeable nose pieces that store in the handle, the ability to install grommets, and a spring-loaded mechanism that automatically ejects the rivet stem. There's even a model with a swiveling head for setting rivets straight on or at an angle.

If you can't staple, nail or rivet the parts together, don't worry; Stanley's got you covered with its line of electric hot-melt glue guns. The high-performance, trigger-feed guns are equipped with many convenient, user-friendly features such as a dual heater for high/low temperature applications, auto-off light, foldout stand, cushion grip and interchangeable nozzles.

# SCREWDRIVERS

Stanley began manufacturing screwdrivers in 1870 – several years before the invention of the telephone or the light bulb – and hasn't stopped since. In 1924 Stanley filed a patent for a ratcheting screwdriver, and in 1937 Henry Phillips, inventor of the Phillips head screw, chose Stanley as the first company to begin making Phillips® screwdrivers.

One other notable achievement includes the 1940 launch of the Stanley® Yankee® Spiraling Ratchet Screwdriver, considered by tool enthusiasts to be the world's first cordless power tool. Throughout the intervening years, Stanley continued to improve and expand its screwdriver line with new designs and durable materials.

Today, Stanley makes screwdrivers in every imaginable size and style, including Phillips®, Torx® and square tip. They're sold individually or packaged in convenient multi-piece kits. The company also makes a line of multi-bit and ratcheting screwdrivers, which come with interchangeable bits: driving standard, cabinet bits and sockets.

Specialty tools include a set of jeweler's screwdrivers for use on tiny screws, offset screwdrivers for reaching fasteners in extremely tight spaces, and a compact pocket screwdriver that comes with two double-ended bits.

Some of the many features found on Stanley screwdrivers include: durable alloy-steel blades with precision-ground tips; large-diameter, soft-grip handles; smooth-dome ends for fast spinning; chrome-plated, corrosion-resistant shafts; and tip-identification icons printed on the handles for quickly identifying the screwdriver type.

Stanley even makes a pair of demolition screwdrivers, which are specially designed to withstand striking blows from a hammer. Each screwdriver is equipped with a shatter-resistant acetate and rubber handle, cold-formed steel striking cap and the Thru-Tang™ bar that transfers the hammer's strike force directly to the screwdriver tip.

This extensive tool category also includes a line of high-quality nut drivers, which feature long-lasting one-piece construction, soft-grip handles, nickel-plated shafts and hex-shaped shanks that permit the use of a wrench when you need to apply a little extra torque.

# CLAMPS

Stanley is world-renowned for manufacturing high-quality tools, a reputation that extends to its line of work-holding clamps. The company offers four different clamps and one cleverly designed portable vise. Each tool is designed to satisfy the demands of professional contractors, machinists, woodworkers and do-it-yourself homeowners.

Stanley's traditional-style MaxSteel® C-Clamp has a 2-inch capacity and advanced frame design that resists flexing and bending. Made of malleable iron and precision roll-formed threads, the clamp has an oversized T-handle for easy tightening. Each trigger clamp can be easily converted to a spreader for separating two parts.

The Stanley Spring Clamp has a 1-inch capacity and is fitted with 3 thick, soft-grip handles and injection-molded jaw pads that help to protect surfaces from dents and scratches.

Lastly, there's the super versatile MaxSteel® Multi-Angle Vise, which is a combination work-holding clamp and vise. It can be conveniently clamped onto a workbench, sawhorse, tailgate or similar object whenever and wherever you need a vise. The swivel-ball design allows you to rotate the vise into a comfortable position and the best possible working angle.

Today, Stanley continues to experiment with new clamp designs made of durable materials. The company uses a variety of materials to build its clamps, including cast iron, stamped metal, reinforced nylon, high-strength steel and cast aluminum. Many models have a corrosion-resistant finish that fights rust and provides a long, serviceable life.

**FatMax Xtreme® Auto Trigger Clamp**

- Rapid return spring mechanism - fastest one-handed bar clamp on the market
- 12" jaw capacity with 220 lbs. of clamping force
- Converts easily to a spreader
- Made from reinforced nylon for durability
- Removable jaw pads/oversized jaw face help protect surfaces from marring and damage

SKU #	TYPE	THROAT DEPTH		LENGTH		BOX QTY	CARTON QTY	UPC
		IN.	MM	IN.	MM			
83-124	Large	3-1/4	83	12	300	0	4	76174831245

**FatMax® Trigger Clamp**

- Drive mechanism provides three times faster travel and 50% more clamping force than competitive traditional products
- Quickly converts from a clamp to a spreader without the use of tools
- Smaller jaw can be positioned anywhere along bar for a range of applications
- Reinforced nylon and steel construction provides strength and durability
- Removable jaw pads help protect surfaces from marring and damage

# FINISHING TOOLS

Stanley is proud of its long-standing commitment to manufacturing some of the world's best finishing tools, including its highly regarded and world-renowned line of hand planes. Stanley has a rich tradition and long history in this tool category, having produced high-quality hand planes since 1870, a fact that has not gone unnoticed by serious antique tool collectors.

Today, there are nearly 20 Stanley hand planes available, ranging from smoothing, jack and block planes to specialty tools such as shoulder/chisel and bull-nose rabbet planes. Each tool is designed and built to deliver clean, precise cuts and to last for several generations. And Stanley pays tribute to its rich history with the introduction of its traditional Sweetheart™ planes and Bailey® planes. Sweetheart™ tools are named after William H. Hart, who was president of Stanley from 1884 to 1915. Bailey® planes commemorate a line of tools that was originally designed by legendary Boston toolmaker Leonard Bailey.

To complement its hand planes, Stanley offers a flat-based SpokeShave, a full assortment of replacement blade irons, and an easy-to-use sharpening system that includes everything you need to sharpen and hone plane irons and wood chisels.

This dynamic tool category also includes Stanley's celebrated line of Surform® tools, which comprises five different super-versatile implements designed for quickly smoothing, shaping and contouring a wide variety of materials ranging from wood, drywall and rabbet to copper, aluminum and brass. A wide variety of Surform® replacement blades is available too.

Rounding out the finishing-tool category, Stanley offers 25 hand files, available in every imaginable size, shape and coarseness, including both single- and double-cut models. These durable, fast-cutting files are sold individually and in convenient four-, five- and six-piece sets.

As you peruse this category, remember that behind every finishing tool are more than 140 years of tool-manufacturing experience, skill and, of course, Stanley's unflagging commitment to excellence.

# PAINT SUNDRIES

Stanley knows that every successful painting job – interior or exterior – starts with a properly prepared surface. So to make surface prep as easy as possible, Stanley offers a full line of paint-prep tools that are specially designed for use by professional painters, drywall contractors and do-it-yourself homeowners. Like all Stanley products, these specialized hand tools are designed and built to outperform and outlast the competition.

The Paint Sundries category includes 4 basic types of surface-prep tools: putty knives, paint scrapers, hand sanders and scrubbing brushes. Within these groups are the tools needed to prepare virtually any surface prior to patching, priming and painting. There are 17 different putty knives, ranging in width from 1-1/4 inches to 4 inches. Most have hardened tempered-steel blades fitted onto durable bi-material, nylon or wood handles.

The high-quality putty knives come with rigid or flexible blades, and are ideal for applying wood putty, joint compound and other spreadable materials. And unlike some tool companies, Stanley offers all blade widths in a choice of rigid or flexible blades, allowing the user to choose the right tool for the job at hand.

Scraping cracked, blistered paint may never be fun, but it's a lot less tedious with Stanley's line of jobsite-ready paint scrapers, which feature long handles for extra leverage and stiff, rust-resistant blades. The 8-tool lineup includes several specialized models, including a safety soft-grip window scraper, glass and tile scraper, bent-blade scraper with removable end cap for attaching an extension pole, and a 6-in-1 Paint Tool that can be used as a scraper, spreader and putty/caulk remover. It's also useful for cleaning paint-roller sleeves, pounding in protruding nail heads, and scratching open cracks and crevices.

Stanley makes 2 different hand sanders, which are useful in sanding smooth, large, flat surfaces including walls, ceilings and flat wood trim. Both models accept regular abrasive paper. Stanley also offers 9 different types of scrub brushes that can be used to clean virtually any surface you're likely to encounter. The brushes come with bristles made of carbon steel, nylon or brass, making it easy to choose the brush that will clean effectively without damaging the surface.

Rounding out the category, Stanley offers an 8-inch-wide drywall knife, 2 styles of caulking guns, and a drywall tool kit that comes with the tools needed to tape drywall joints; it even includes a roll of fiberglass-mesh joint tape.

# ILLUMINATION

Stanley is responsible for helping to revolutionize the flashlight industry and creating a whole new category of personal, portable lighting devices. After years of research and development, the company now offers a full range of hands-free work lights and high-performance aluminum flashlights that boast the latest design innovations and LED bright-light technologies. More importantly, each new model delivers the 4 characteristics that everyone wants in a portable light: brightness, reliability, ruggedness and long-term durability.

This category includes the innovative new hands-free Stanley Clamp Light, which has a large spring-loaded handle that opens up to 4 inches wide for grabbing onto exposed ceiling joists, wall studs, fence posts, table tops and/or car hoods. It features an oversized rotating, tilting head; impact-resistant housing; non-slip comfort grip; and super-bright LED bulb with shatterproof lens. It's also equipped with parallel-cell technology, which allows the light to run on 2 or 4 C-size batteries for up to 30 hours of illumination.

Another innovation pioneered by Stanley is its line of LED tripod lights. Each light can be used as a standard flashlight, but at the push of a button, 3 legs pop out, converting the handheld flashlight into a freestanding lantern. There are 4 different sizes of tripod lights, including the 3-in-1 model that can be used as a powerful handheld flashlight, as a freestanding lantern, or disassembled and used as 3 separate smaller flashlights. All Stanley tripod lights feature pivoting heads for precisely aiming the light beam exactly where it's needed.

To satisfy the demand for high-performance, extremely rugged flashlights, Stanley manufactures a line of pro-duty aluminum flashlights that feature durable anodized-aluminum bodies fitted with non-slip grips, electroplated reflectors, shatterproof lenses and weather-resistant seals that keep out dust and moisture. Both battery-powered and rechargeable models are available.

### Stanley® LED Clamp Flashlight

- Clamp feature provides for hands-free use
- Spring-loaded clamp opens to 4" wide to allow for gripping onto ceiling beams, floor joists, tabletops, pipes and vehicle components
- 350° rotational head with 120° tilt focuses light where it is needed most
- Powerful flood lighting will illuminate a large work surface area
- Parallel cell technology uses 2 or 4 C cell batteries with up to 30 hours of use
- One 3-watt bright white, long-lasting LED delivers a strong spot beam and 77 lumens of light
- Non-marring rubberized clamp feet and non-slip comfort grip
- On/Off switch
- Meets or exceeds ANSI standards
- Compliant with ANSI, CE and RoHs standards

# ADJUSTABLE WRENCHES, PLIERS & SNIPS

Stanley has quietly built one of the most impressive – and extensive – lines of adjustable wrenches, pliers and snips offered by any tool manufacturer available on the market today. This single category encompasses nearly 95 individual tools, many of which possess innovative designs and unique performance-enhancing features.

The tools within this category include both standard/traditional models and updated versions of the same tools. For example, Stanley offers 4 different slip-joint pliers and 2 sizes of the FatMax® Push-Lock™ Slip-Joint Pliers, which are equipped with a push-button that allows for fast and easy adjustment of the jaws. There are 18 different adjustable wrenches, including 4 FatMax Xtreme® models featuring a unique ratcheting jaw that permits the wrench to be repositioned after each swing of the handle without removing the tool from the fastener.

Stanley also recognizes that in the real world it takes more than one type of any single tool to get the job done right. That's why the company offers a broad range of models for each tool. For instance, there 9 aviation snips to choose from, including ones specifically designed for cutting straight, to the left and/or to the right. Although some workers can get by with a single pair of long-nose pliers, Stanley makes 9 models, including bent-nose and self-locking types.

Also included in this category are forged-handle bolt cutters, which can cut steel up to 1/4-inch thick; a heavy-duty cast-iron pipe wrench; straight pattern tinner snips that will slice through 25-gauge cold-rolled steel and 28-gauge stainless steel; wire strippers that can cut crimp wires; and locking C-clamp pliers, which are equipped with swiveling pads that help to evenly distribute clamping pressure.

This is the kind of variety, quality and innovation professional contractors and do-it-yourselfers alike have come to expect from Stanley, and those characteristics are clearly evident in every tool offered within this category.

- Anti-slip mechanism locks the movable jaw and tightly grips onto fastener
- Wide locking handle allows for a sturdy and comfortable grip
- Knurl adjusting mechanism for quick and precise adjustment
- Built-in tension spring stabilizes movable jaw
- Forged chrome vanadium steel is strong and durable
- Polished chrome head and chrome-plated body for anti-corrosion protection
- Meets ANSI specifications

# MECHANICS' TOOLS

Stanley flexes its tool-manufacturing muscles by continuously enhancing and enlarging its already massive collection of high-quality mechanics' tools. This significant tool category includes a wide variety of ratchets, sockets, wrenches and accessories in many styles, sizes and finishes.

The tools are sold individually or in convenient, multi-piece sets that range from as few as 2 pieces up to 201 pieces. And nearly all sets include the most popular standard (SAE) and metric (mm) sizes in multiple drive sizes to meet the demands of any job. So if you've got a bolt, nut or screw to tighten or loosen, you can be sure that Stanley has the right tool – and the right-sized tool – to get the job done.

Stanley ratchets have an ergonomically designed handle, forward/reverse switch and a quick-release button for easy operation and quick socket changeover. They are available in pear head and round head styles and in 3 basic drive sizes, including 1/4, 3/8 and 1/2 inch. The slim profile, low arc swing and high torque provide easy operation in hard-to-reach areas and deliver ultimate torque for heavy-duty applications. Our innovative rotator ratchet equipped with a unique twist handle design, delivers a zero-degree arc swing and is ideal for applications where work space is limited. There's also a cleverly designed extendable ratchet that's equipped with a telescopic handle that extends from 10 to 15 inches long for additional torque and leverage.

Stanley wrenches are available in many different styles (combination, ratcheting, open end ratcheting, etc.), sizes and finishes (full-polish, black chrome, satin, etc.). They are precision machined to fit tightly onto fasteners and are protected against corrosion by a nickel-chrome-plated finish. The Stanley line of open end ratcheting wrenches features patented technology that allows 50% faster operation and tightening/loosening of fasteners without disengaging the wrench from the fastener. The latest addition to the category is Stanley's Black Chrome Socket Sets that feature midnight-black sockets with laser-etched marking. The large, permanent markings make it easy to see the size of each socket, even in dimly lit spaces.

### RATCHETS

Stanley® ratchets and accessories are designed to meet or exceed ANSI specifications. All are forged from high-quality steel and finished in high-polish chrome. Selected Stanley® high-torque ratchets have a Quick Release™ mechanism for one-handed use. Sockets and extensions remain locked onto the drive until disengaged with an easy-to-reach, low-profile quick-release button. Stanley® Pear Head Ratchets have a slim profile and a small 7-degree arc swing for accessing hard-to-reach fasteners.

#### Pear Head Quick Release™ Ratchet

- Pear head design for strength, durability and performance
- Quick-release mechanism to lock sockets onto the drive during operation and allow easy changeover
- Reversible mechanism for easy one-hand direction change
- Chrome vanadium steel forging for durability and high-torque performance
- Lifetime warranty

#### Rotator Ratchet

- Unique twist handle technology with 0° twist arc swing allows accessibility in tight spaces
- 60-tooth gear system for low ratcheting arc swing and high-torque ratcheting
- Quick release mechanism to lock sockets onto the drive during operation and allow easy change over
- Reversible mechanism for forward and reverse transition
- Chrome Vanadium steel forging for durability and high torque
- Bi-material ergonomic handle design for grip and comfort
- Lifetime warranty

### Extendable Ratchet

- Extendable handle technology allows for handle extension from 10" to 15" and 5 locking positions
- 60-tooth gear system for low ratcheting arc swing and high-torque ratcheting
- Flexible locking head for operation in limited access areas
- Low-profile pear head design for accessibility
- Quick-release mechanism to lock sockets onto the drive during operation and allow easy changeover
- Reversible mechanism for forward and reverse transition
- Chrome vanadium steel forging for durability and high-torque performance
- Lifetime warranty

### SOCKET SETS

Stanley offers a complete range of SAE and metric-sized sockets and 1/4", 3/8" and 1/2" drive tools. Our socket sets combine the most popular tools for easy accessibility. Stanley® drive tools are forged from high-quality steel and finished in high-polish nickel chrome or black chrome. Selected ratchet handles are ergonomically designed and have an easy-to-use, thumb-operated reverse-switch mechanism. Sockets and extensions remain locked onto the drive until disengaged with an easy-to-reach, low-profile quick-release button.

Stanley® sockets feature our Max-Drive™ design, a unique radius corner design that provides 15% more torque\* to tighten fasteners easily and simplify the turning of rounded corners. Max-Drive™ helps reduce fastener wear by minimizing contact on the outer 5% of the fastener, helping to increase life expectancy.\* It also helps reduce slipping on frozen or rusted fasteners.

All Stanley® ratchets, sockets and wrenches are manufactured globally to Stanley specifications, meeting and often exceeding ANSI specifications.

## WRENCHES

Stanley® wrenches are designed to meet or exceed ANSI specifications. The box end of the Stanley® Combination Wrench employs the Max-Drive™ system, which allows the box end to contact the fastener away from the corner. This system allows 15% more torque\* to be applied to the fastener and helps reduce fastener rounding.

## COMBINATION WRENCHES

- Chrome vanadium steel forging for durability and high torque
- Max-Drive™ design of the box end allows for 15% more torque\* and helps reduce fastener rounding
- 15-degree box end offset for additional knuckle clearance
- Full polish plating for anti-corrosion protection and easy cleaning
- Lifetime warranty

## 20-Piece Combination Wrench Set

- 20-piece wrench set metric and SAE
- 100% chrome vanadium steel
- Max-Drive™ wrenches for improved torque\*

## IMPACT SOCKETS

Stanley® sockets feature our Max-Drive™ design, a unique radius corner design that provides 15% more torque,\* making it easy to tighten fasteners and simplifying the turning of rounded corners. Helps reduce fastener wear without contact with the outer 5% of the fastener. Helps reduce slipping on frozen or rusted fasteners. These impact sockets are made of alloy steel for strength and durability, then heat-treated to balance strength and hardness. The socket wall thickness is optimized to provide strength while retaining ample access to restricted fasteners. All sockets meet or exceed ANSI specifications.

# TOOL STORAGE

Stanley has taken the same principles it uses to build world-class hand tools – quality, innovation and durability – and applied them to the manufacturing of its tool-storage products. This comprehensive category is divided into 6 product lines: tool bags, toolboxes, mobile storage devices, organizers and bins, garage workshop cabinets, and collapsible sawhorses. In total, there are more than 80 storage products available, and each one is well engineered, thoughtfully designed and job-site tough. In other words, it's exactly what you'd expect from Stanley.

The soft-sided tool bags feature rugged, rip-resistant polyester sides and hard-wearing polypropylene bottoms. Many have stay-open, wide-mouth designs for easily storing and retrieving hand tools. There are bags of various sizes and styles, as well as wheeled tool bags and an easy-carry tool backpack.

Stanley's line of weather-resistant toolboxes comes in many sizes and shapes to satisfy virtually any tradesperson, machinist, technician or do-it-yourselfer. The storage units are made from a variety of long-lasting materials, including heavy-duty structural foam, high-impact plastic, and a combination of plastic and metal.

The mobile storage devices combine maximum tool storage and easy-rolling portability. Each device is equipped with stout handles and large heavy-duty wheels, allowing you to transport your tools across difficult terrain. For the ultimate in tool security and safety, Stanley offers the FatMax Xtreme® Portable Truck Box. This cavernous wheeled chest has a truck-bed docking station and a StanleyGuard™ integrated security system that features an alarm and code panel to help deter thieves.

To help organize clutter in workshops and truckbeds, Stanley offers 20 different small-parts organizers and storage bins. These products can be neatly stacked, nested, stored away and then carried from job to job, allowing maximal organization with internal drawers, compartments, removable cups and dividers.

The company also manufactures a collection of tough, durable storage cabinets that are specifically designed for the garage or workshop. It includes 16-inch-deep wall cabinets and 20-inch-deep freestanding base cabinets.

To complete the category are 3 styles of portable, collapsible sawhorses. The 2 twin packs of plastic sawhorses can each support up to 1,000 pounds. The fully featured FatMax® Sawhorse has 4-way adjustable aluminum legs; it can support an astonishing 2,500 pounds per pair.
